

task 1

Create your own scss file where you import bootstrap.scss.

task 2

Create a new custom button that is a combination of two bootstrap buttons.

task 3

Change the color of your custom button.

task 4

Create your own variables.scss and create your own "theme".

task 5

Create a custom container class, that has background color of your choosing, rounded corners and a shadow.

task 6

Create a custom class called "box" that has a set height and border or shadow.

task 7

Use nesting to create two versions of this box, with different background colors. Think about if font properties should be here, or in the parent.
